## description

These devices contain dual 4-input positive NOR gates with strobe. They perform the Boolean function:

$$Y = \overline{G(A + B + C + D)}$$

(with  $1X$  and  $1\bar{X}$  of '23 left open).

The SN5423 and the SN5425 are characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN7423 and the SN7425 are characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .

**NOTES:**

- A. Component values shown are nominal.
- B. Both expander inputs are used simultaneously for expanding.
- C. If expander is not used leave X and X open.
- D. A total of four expander gates can be connected to the expander inputs.

**absolute maximum ratings over operating free-air temperature range (unless otherwise noted)**

**NOTES:** 1. Voltage values, except interemitter voltage, are with respect to network ground terminal.  
2. This is the voltage between two emitters of a multiple-emitter transistor.
