## 74F139

# **Dual 1-of-4 Decoder/Demultiplexer**

## **General Description**

The F139 is a high-speed, dual 1-of-4 decoder/demultiplexer. The device has two independent decoders, each accepting two inputs and providing four mutually exclusive active LOW outputs. Each decoder has an active LOW Enable input which can be used as a data input for a 4-output demultiplexer. Each half of the F139 can be used as a function generator providing all four minterms of two variables.

#### **Features**

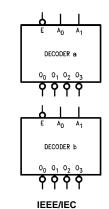

- Multifunction capability
- Two completely independent 1-of-4 decoders
- Active LOW mutually exclusive outputs

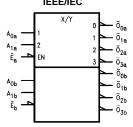

## **Ordering Code:**

| Order Number | Package Number | Package Description   |
|--------------|----------------|---|
| 74F139SC     | M16A           | 16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150 Narrow |
| 74F139SJ     | M16D           | 16-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide               |
| 74F139PC     | N16E           | 16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300 Wide       |

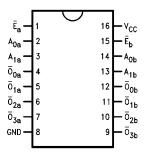

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

## **Functional Description**

The F139 is a high-speed dual 1-of-4 decoder/demultiplexer. The device has two independent decoders, each of which accepts two binary weighted inputs  $(A_0-A_1)$  and provides four mutually exclusive active LOW Outputs  $(\overline{O}_0-\overline{O}_3)$ . Each decoder has an active LOW enable  $(\overline{E})$ . When  $\overline{E}$  is HIGH all outputs are forced HIGH. The enable can be used as the data input for a 4-output demultiplexer application. Each half of the F139 generates all four minterms of two variables. These four minterms are useful in some applications, replacing multiple gate functions as shown in Figure 1, and thereby reducing the number of packages required in a logic network.
