description

These data selectors/multiplexers contain inverters and drivers to supply full data selection to the four output gates. A separate strobe (G̅) input is provided. A 4-bit word is selected from one of two sources and is routed to the four outputs. The ′ALS157A and SN74AS157 present true data. The ′ALS158 and SN74AS158 present inverted data to minimize propagation delay time.

The SN54ALS157A and SN54ALS158 are characterized for operation over the full military temperature range of −55°C to 125°C. The SN74ALS157A, SN74ALS158, SN74AS157, and SN74AS158 are characterized for operation from 0°C to 70°C.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage, V_{CC} .... 7 V

Input voltage, V_I .... 7 V

Operating free-air temperature range, T_A: SN54ALS157A, SN54ALS158 .... −55°C to 125°C

SN74ALS157A, SN74ALS158 .... 0°C to 70°C

Storage temperature range .... −65°C to 150°C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

       B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control.
          Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
       C. When measuring propagation delay items of 3-state outputs, switch S1 is open.
       D. All input pulses have the following characteristics: PRR ≤ 1 MHz, $t_r = t_f = 2$ ns, duty cycle = 50%.
       E. The outputs are measured one at a time with one transition per measurement.
