Description

The 'HC123, 'HCT123, CD74HC423 and CD74HCT423 are dual monostable multivibrators with resets. They are all retriggerable and differ only in that the 123 types can be triggered by a negative to positive reset pulse; whereas the 423 types do not have this feature. An external resistor (R_X) and an external capacitor (C_X) control the timing and the accuracy for the circuit. Adjustment of R_X and C_X provides a wide range of output pulse widths from the Q and \bar{Q} terminals. Pulse triggering on the \bar{A} and B inputs occur at a particular voltage level and is not related to the rise and fall times of the trigger pulses.

Once triggered, the output pulse width may be extended by retriggering inputs \bar{A} and B. The output pulse can be terminated by a LOW level on the Reset (R) pin. Trailing edge triggering (\bar{A}) and leading edge triggering (B) inputs are provided for triggering from either edge of the input pulse. If either Mono is not used each input on the unused device (\bar{A} , B, and R) must be terminated high or low.

The minimum value of external resistance, R_X is typically 5k Ω . The minimum value external capacitance, C_X , is 0pF. The calculation for the pulse width is $t_W = 0.45 R_X C_X$ at $V_{CC} = 5V$.
